

ABSTRACT

A method includes selecting a video source view from at least one of a plurality of vehicle-mounted video sources based on detection of a vehicle event. The video source view may be displayed according to a presentation mode. The method may include associating a plurality of vehicle events with a video source view or video presentation mode. A system includes display logic selecting a video source view from a plurality of vehicle-mounted video sources based on detection of a vehicle event. The system can include presentation rules specifying an association between a plurality of vehicle events and a video source view and/or a video presentation mode. The presentation rules are editable and configurable.
